### **About Kura Oncology**

Kura Oncology is a clinical-stage biopharmaceutical company focused on the discovery and development of precision medicines for the treatment of solid tumors and blood cancers. Kura's pipeline consists of small molecules that target cancer signaling pathways where there is a strong scientific and clinical rationale to improve outcomes by identifying those patients most likely to benefit from treatment. The company's lead drug candidate is tipifarnib, a farnesyl transferase inhibitor that is currently in two Phase 2 clinical studies: the first study in patients with locally advanced solid tumors that carry HRAS mutations and the second study in patients with peripheral T-cell lymphoma. The company plans to initiate a third Phase 2 clinical study in patients with lower risk myelodysplastic syndromes in the first half of 2016. Kura's preclinical pipeline includes KO-947, an ERK inhibitor, and a menin-MLL inhibitor program.
