

Kura Oncology Announces Pricing of Public Offering of Common Stock

August 11, 2017

SAN DIEGO, Aug. 10, 2017 (GLOBE NEWSWIRE) -- Kura Oncology, Inc. (NASDAQ:KURA), a clinical-stage biopharmaceutical company focused on the development of precision medicines for oncology, today announced the pricing of an underwritten public offering of 7,700,000 shares of its common stock at a price to the public of \$6.50 per share. Kura Oncology has granted the underwriters a 30-day option to purchase up to an additional 1,155,000 shares of its common stock. The offering is expected to close on or about August 16, 2017, subject to customary closing conditions. The gross proceeds to Kura Oncology from the offering, excluding any exercise by the underwriters of their 30-day option to purchase additional shares, are expected to be approximately \$50.1 million, before deducting underwriting discounts and commissions and other offering expenses payable by Kura Oncology.

Leerink Partners and Cowen are acting as joint book-running managers in the offering. JMP Securities and Oppenheimer & Co. are acting as co-lead managers.

The securities described above are being offered by Kura Oncology pursuant to a shelf registration statement on Form S-3, including a base prospectus, that was previously filed by Kura Oncology with the Securities and Exchange Commission (the "SEC") and that was declared effective on April 14, 2016. About Kura Oncology

Kura Oncology is a clinical-stage biopharmaceutical company committed to realizing the promise of precision medicines for the treatment of cancer. Kura Oncology's pipeline consists of small molecule drug candidates that target cancer signaling pathways where there is a strong scientific and clinical rationale to improve outcomes by identifying those patients most likely to benefit from treatment. Kura Oncology's lead drug candidate is tipifarnib, a farnesyl transferase inhibitor, which is currently being studied in multiple Phase 2 clinical trials. Kura Oncology's pipeline also includes KO-947, an ERK inhibitor, currently in a Phase 1 trial, and KO-539, an inhibitor of the menin-MLL protein-protein interaction, currently in preclinical testing.
